Chapter 1

Introduction

1.1 Motivation

1.2 Contributions of the Thesis

Chapter 2

Application Scenarios

2.1 Distributed Energy Management

2.1.1 The Unit Commitment Problem

2.1.2 Complexity of the Problem

2.1.3 Hierarchies of Autonomous Virtual Power Plants

2.1.4 Trust To Manage Uncertainty

2.1.5 Related Work

2.2 Preference-based University Tasks

2.2.1 Exam Appointment Scheduling

2.2.2 Mentor Matching [Constraints'16]*

2.2.3 Multi-User Multi-Display Exhibitions [ModRef'15]*

2.2.4 Related Work

Chapter 3

Foundations

- 3.1 Self-organization – Designing Systems to Adapt
- 3.2 Controlling Emergence – The Restore Invariant Approach
- 3.3 Classical Constraint Programming for Combinatorial Problems
- 3.4 Over-Constrainedness in Practical Problems
 - 3.4.1 Partial Constraint Satisfaction
 - 3.4.2 Algebraic Structures for Soft Constraints
- 3.5 Algorithms to Solve Soft Constraint Problems
 - 3.5.1 Branch-and-Bound Search
 - 3.5.2 Large-Neighborhood Search
 - 3.5.3 Optimization in Constraint Programming Solvers
- 3.6 Mathematical Programming
 - 3.6.1 Linear Programming
 - 3.6.2 Mixed Integer Programming
- 3.7 Modeling Languages
 - 3.7.1 MiniZinc and MiniSearch
 - 3.7.2 Essence

Chapter 4

Soft Constraints

- 4.1 Specifying Optimal Behavior – A Soft Corridor
- 4.2 Qualitative Specification using Constraint Relationships [SGAI’13]*
 - 4.2.1 Syntax
 - 4.2.2 Semantics – Dominance Properties
 - 4.2.3 Evaluation in the Energy Scenario [SEN-MAS’14]*
- 4.3 Relationship with General Formalisms [IC-TAI’14]*
 - 4.3.1 Free Construction of Partial Valuation Structures
 - 4.3.2 Free Construction of C-Semirings
- 4.4 Mapping Organizations – Combinations of Preference Structures [Wirsing’15]*
 - 4.4.1 Direct Product
 - 4.4.2 Lexicographic Product
- 4.5 Applications of Constraint Relationships
 - 4.5.1 Distributed Energy Management [SEN-MAS’14]*
 - 4.5.2 Preference-based University Tasks

Chapter 5

MiniBrass – A Modeling Language for Soft Constraints[Constraints’16]*

5.1 Workflow

5.2 Type Declarations

5.3 Operators

5.4 Consistency Checks and Utilities

5.5 Soft Global Constraints

5.6 PVS-based Generic Search

5.6.1 Branch-and-Bound

5.6.2 Large Neighborhood Search

5.6.3 Adaptive Large Neighborhood Search

5.7 Evaluation

5.7.1 Benchmark Instances

5.7.2 Comparison with `toulbar2`

5.7.3 Efficiency of Generic Heuristics

5.7.4 Comparing PVS-Types

Chapter 6

Supply Automata for Prosumers [SEN-MAS'14]*, [TCCI'15]*

6.1 Challenges in Unit-Commitment

6.2 Existing Formulations

6.3 Automata-based Specification of Optimization Problems

6.3.1 Syntax

6.3.2 Semantics

6.3.3 Translation to Mixed Integer Programs

6.4 Examples

6.4.1 Modeling Cold and Hot Start-up

6.4.2 Scheduling a Biogas-Plant

6.5 Related Work

Chapter 7

Abstraction of Collective Behavior [ICAART'14]* [TCCI'15]*

7.1 Obtaining Simple Representations of Production Spaces

7.2 Deriving Efficient Bounds for Future Time Steps

7.3 Calculating Approximate Functions for Collectives

7.3.1 Principle of Sampling Function Points

7.3.2 Selection Strategies [SASO'15']*

7.4 Relationship with Unit-Commitment Algorithms

7.4.1 Regio-Central Robust Optimization [SAOS'14]

7.4.2 Market-Based Robust Optimization [TAAS'15] [SASO'15]

Chapter 8

Conclusion, Discussion, and Future Challenges

8.1 Summary of Research Contributions

8.2 Open Research Challenges
